

DÉCORTECH MDF

MDF is an excellent substrate that can be combined with either a real timber veneer to add natural warmth and elegance to any space or with Décortech factory applied UV satin paint finish for a high quality finish that can be matched to suit any interior.

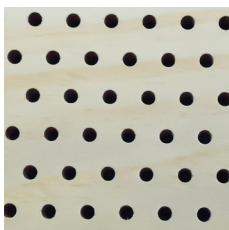

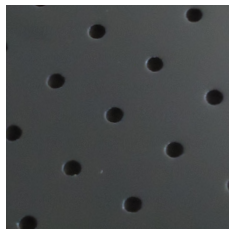

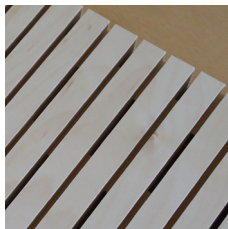

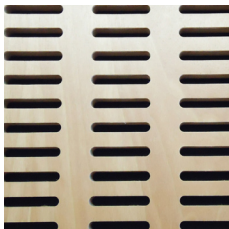

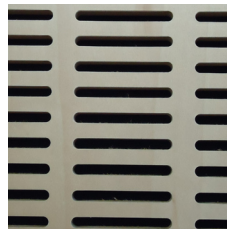

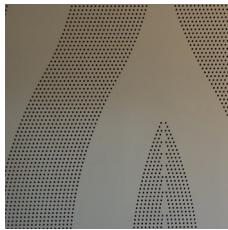

Décortech MDF is ideal to use when the aesthetic qualities of wood or a high quality paint finish are desired. Suitable applications include wall and ceiling linings and acoustic panels especially for schools, hospitals, commercial and public buildings, as well as display panels and partition screens.

Décortech MDF is environmentally friendly and produced under an environmental management system that is certified to ISO-14001 and FSC certified is available. Wood veneers are sourced from sustainable and renewable forests and EC, FSC and COC veneers can be provided on request.

Available in a full range of stylish acoustic perforations both standard and fully customised, Décortech panels can be used to create perfect acoustic performance. Our panels come prefinished preventing the need for additional onsite trades after installation reducing costs as well as potential onsite issues such as spills, overspray or damage.

Why Wood

Décortech specialises in decorative, acoustic and fire retardant timber panels utilising the many benefits of wood, including its renewability, sustainability, energy efficiency, and natural elegance. Timber veneer when added to Décortech MDF brings a modern and warm look to any space and is enhanced by our Décortech factory applied satin finish for a fresh, clean, premium result every time.

Décortech MDF is available in a range of stylish finishes and perforations.
